

Literature Benchmark Brief: Pinson_2013_WindEnergy

Title: Wind power forecasting: From point forecasts to probabilistic scenarios

Authors: P. Pinson (2013)

Venue: Wind Energy | **DOI:** 10.1002/we.1558

Cluster: Cluster D: Probabilistic Sizing & Reserve

Core Theoretical Mechanism & Model Formulation

Comprehensive review of probabilistic forecasting, reliability, sharpness, and scoring rules

Empirical Scale & Experimental Dataset

Review of European utility forecasting implementations

Relevance to IEEE TSTE & Sustainable Energy Systems

Defines reliability calibration metrics (empirical coverage vs nominal quantile)

Identified Gaps & Operational Vulnerabilities

Review article; did not explore telemetry communication latency degradation

Role in Manuscript Defense & Reviewer #2 Proof

Foundational citation establishing why 10% violation target ($q^*=0.90$) is standard
