

Literature Benchmark Brief: TautzWeinert_2017_RSER

Title: Using SCADA data for wind turbine condition monitoring — A review

Authors: J. Tautz-Weinert, S. J. Watson (2017)

Venue: Renewable and Sustainable Energy Reviews | **DOI:** 10.1016/j.rser.2016.11.160

Cluster: Cluster B: SCADA Degradation & Reliability

Core Theoretical Mechanism & Model Formulation

Comprehensive survey on 10-min SCADA sampling, aggregation artifacts, and sensor errors

Empirical Scale & Experimental Dataset

Global commercial wind farm SCADA repositories

Relevance to IEEE TSTE & Sustainable Energy Systems

Authoritative reference for 10-min SCADA operational standards and sensor reliability issues

Identified Gaps & Operational Vulnerabilities

Qualitative review without algorithmic benchmark for operating reserve sizing

Role in Manuscript Defense & Reviewer #2 Proof

Cited for SCADA 10-minute averaging artifacts and pitch register unobservability
