

Literature Benchmark Brief: Yang_2020_TSTE

Title: Cyber-physical reliability assessment of wind farm control under communication delays

Authors: L. Yang, Y. Zhao, C. Shen, Z. Xu (2020)

Venue: IEEE Transactions on Sustainable Energy | **DOI:** 10.1109/TSTE.2019.2949821

Cluster: Cluster B: SCADA Degradation & Reliability

Core Theoretical Mechanism & Model Formulation

Joint semi-Markov state transition of wireless channel latency and turbine control stability

Empirical Scale & Experimental Dataset

Utility wind farm simulation testbed

Relevance to IEEE TSTE & Sustainable Energy Systems

Examines control performance degradation under communication latency in TSTE

Identified Gaps & Operational Vulnerabilities

Evaluates closed-loop frequency regulation, not market pre-dispatch reserve screening

Role in Manuscript Defense & Reviewer #2 Proof

Aligns manuscript scope with TSTE's cyber-physical grid integration lineage
