

Literature Benchmark Brief: Zhang_2022_ApplEnergy

Title: Reliability evaluation of offshore wind farm electrical collector system considering communication failures

Authors: Y. Zhang, H. Sun, Z. Bie, B. Yan (2022)

Venue: Applied Energy | **DOI:** 10.1016/j.apenergy.2022.119428

Cluster: Cluster B: SCADA Degradation & Reliability

Core Theoretical Mechanism & Model Formulation

Collector ring network topology availability and telemetry failure impact on farm yield

Empirical Scale & Experimental Dataset

Offshore wind farm cluster

Relevance to IEEE TSTE & Sustainable Energy Systems

Emphasizes telemetry loss as a primary driver of operational unreliability

Identified Gaps & Operational Vulnerabilities

Treats generation deterministically without quantile reserve risk optimization

Role in Manuscript Defense & Reviewer #2 Proof

Underpins motivation for evaluating telemetry latency and burst packet dropout envelopes
