

Literature Benchmark Brief: Das_2023_TMLR

Title: Long-term forecasting with TiDE: Time-series Dense Encoder

Authors: A. Das, W. Kong, A. Leach, S. Sen, R. Yu (2023)

Venue: Transactions on Machine Learning Research | **DOI:** 10.48550/arXiv.2304.08424

Cluster: Cluster E: Missing Data & Modular Risk Layers

Core Theoretical Mechanism & Model Formulation

Multilayer Perceptron (MLP) dense encoder-decoder with linear projection

Empirical Scale & Experimental Dataset

Large-scale forecasting benchmarks

Relevance to IEEE TSTE & Sustainable Energy Systems

Shows that simple dense architectures can match or exceed complex transformers

Identified Gaps & Operational Vulnerabilities

Lacks spatio-temporal graph diffusion for spatial wake propagation

Role in Manuscript Defense & Reviewer #2 Proof

Supports our finding that compact Dense backbone matches complex dynamic MoE
